

Drive2Drive 2.0

Drive2Drive 2.0 makes upgrading to a new hard disk faster and easier than ever. Running entirely from within the Windows environment, the Drive2Drive wizard allows you to copy an entire hard disk or an individual drive or partition to another hard disk -- all without losing a single user preference or byte of data. Drive2Drive also features plug and play detection of new hard disks to guide you the instant you add your new hard disk. The trial edition of Drive2Drive is fully functional except it does not provide drive (partition) resizing. Read more by visiting our website at <http://www.fssdev.com/products/drive2drive>.

Our Review:

This is great! With Drive2Drive you no longer have to wait until you can afford both a new hard drive AND the cost of a technician to install it - the whole process of upgrading your hard drive is covered by Drive2Drive. Essentially, Drive2Drive will make a perfect copy of all your data on your original drive - copying it quickly and reliably to your brand spanking new hard drive. The process usually involved to do this is tedious and complicated - so Drive2Drive is a welcome breath of fresh air. Drive2Drive even makes it easy to partition your new drive. Excellent (and comforting) help and wizards - recommended for those of you thinking/wishing about upgrading your storage capacity.
